

INSTALLATION OF MYSQL ON MAC.

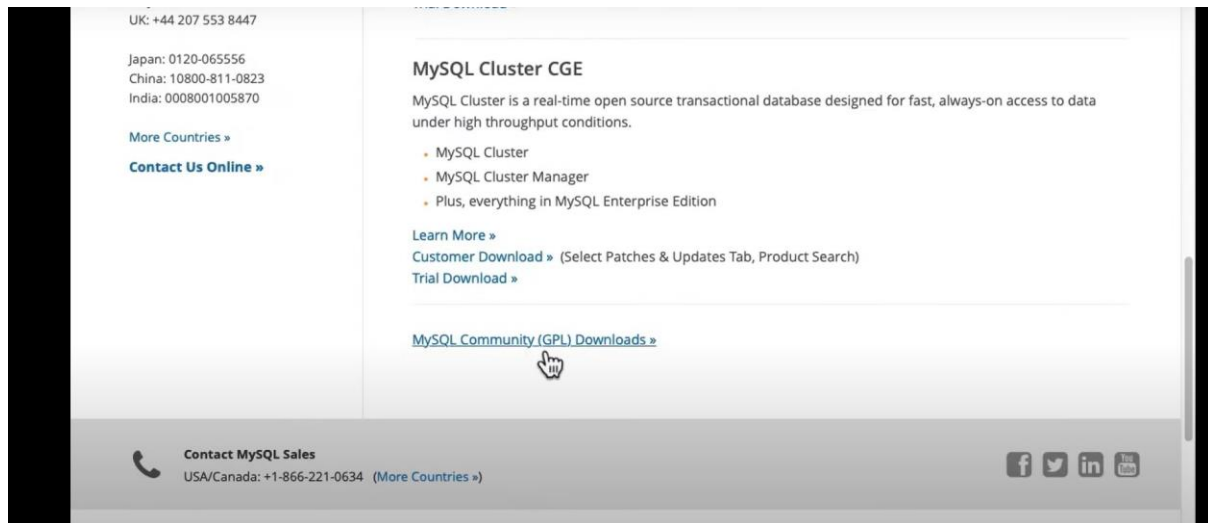

1. The given image below will open , search MySQL in google,and click on www.mysql.com.

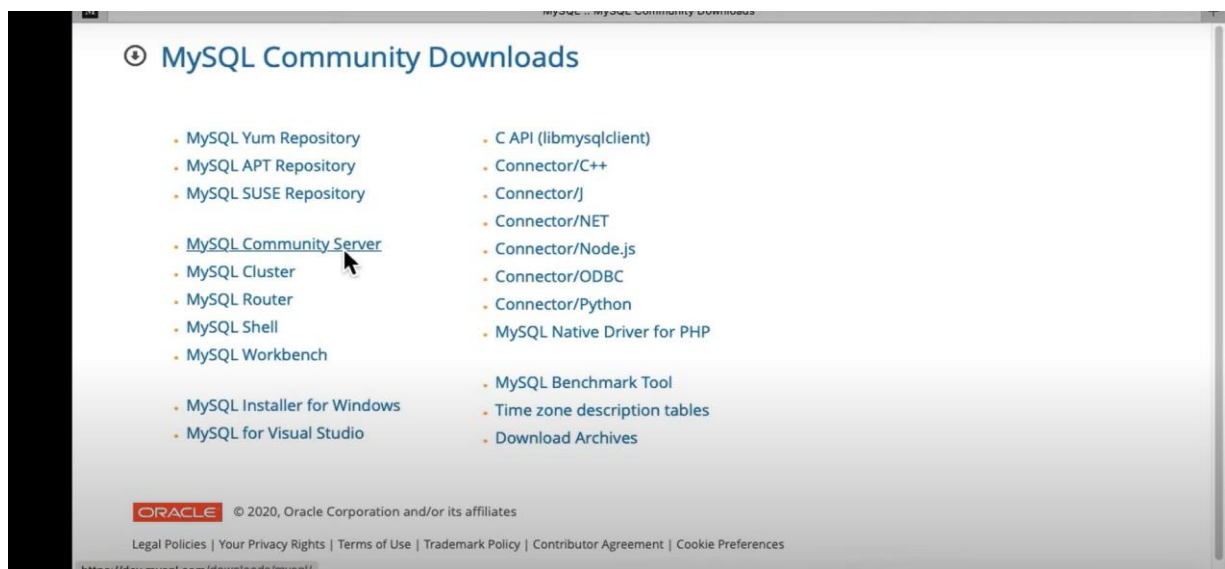

2. The given image below will open , click on downloads option.

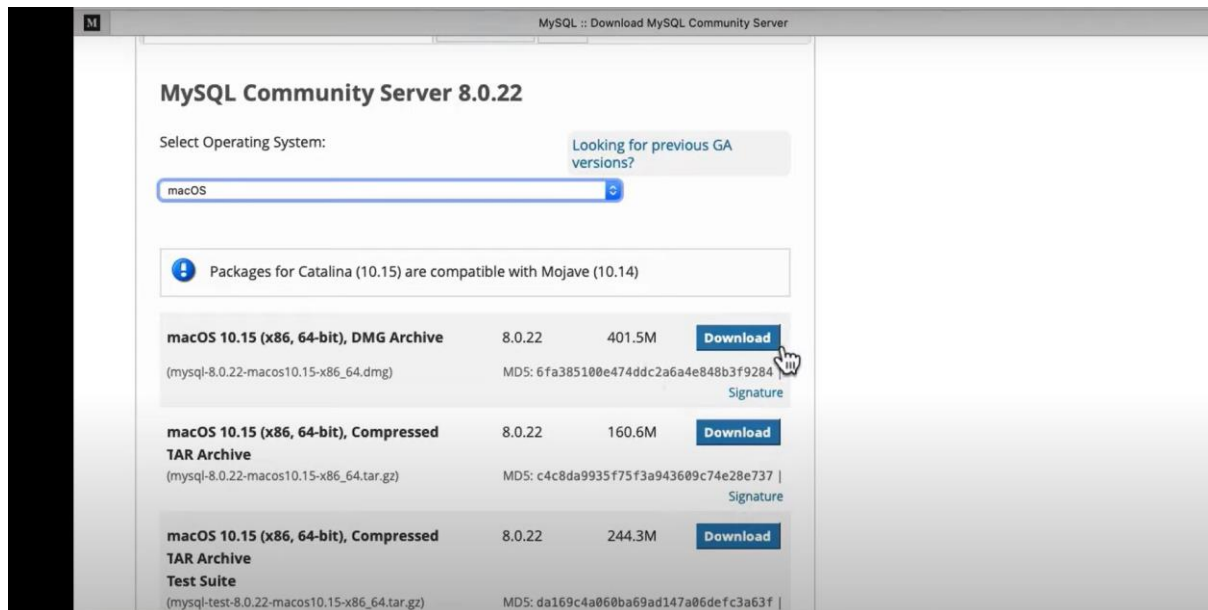

3. The given image below will open , click on MySQL community (GPL) Downloads.

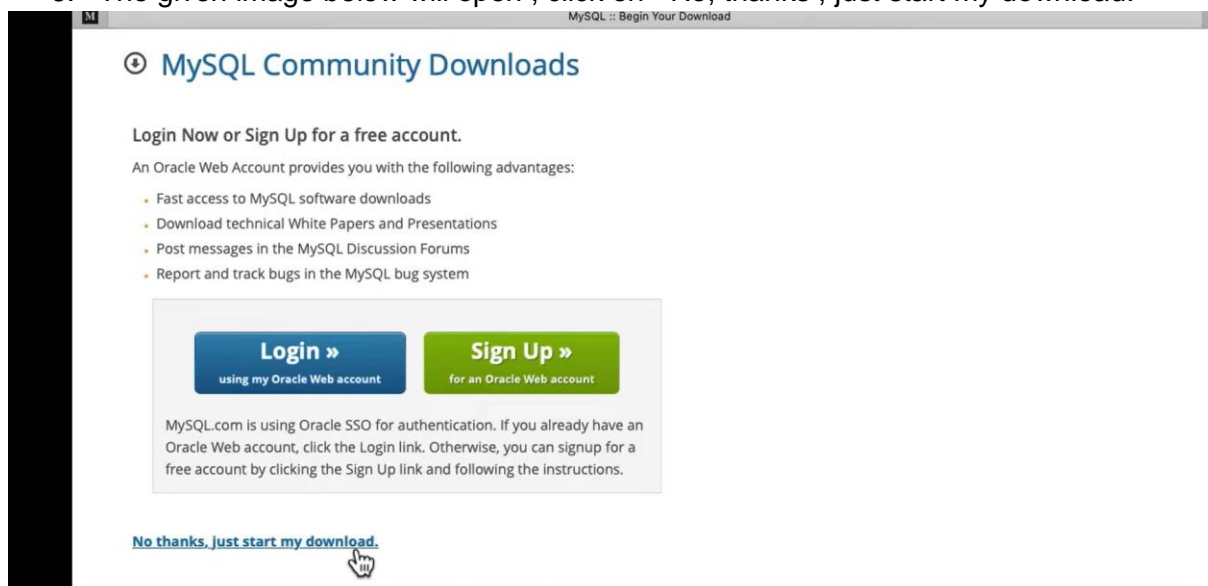

4. The given image below will open , In MySQL community downloads Click on MySQL community server.

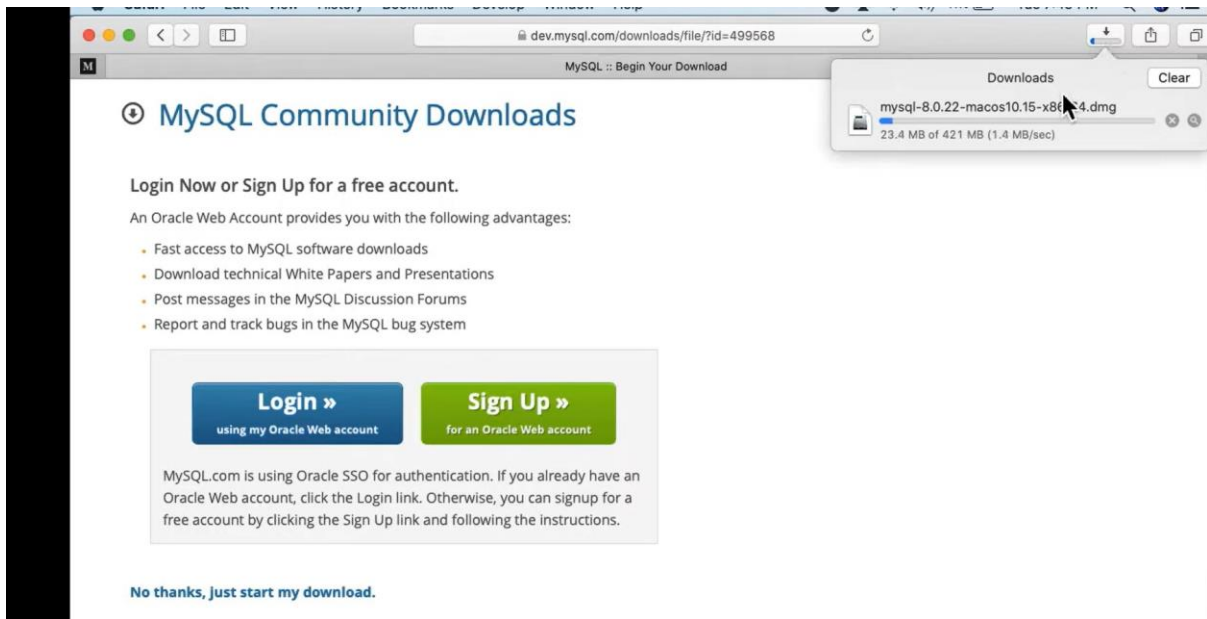

5. The given image below will open, in select Operating system —select on macOS and click on 1st download option where file size is 401.5M.

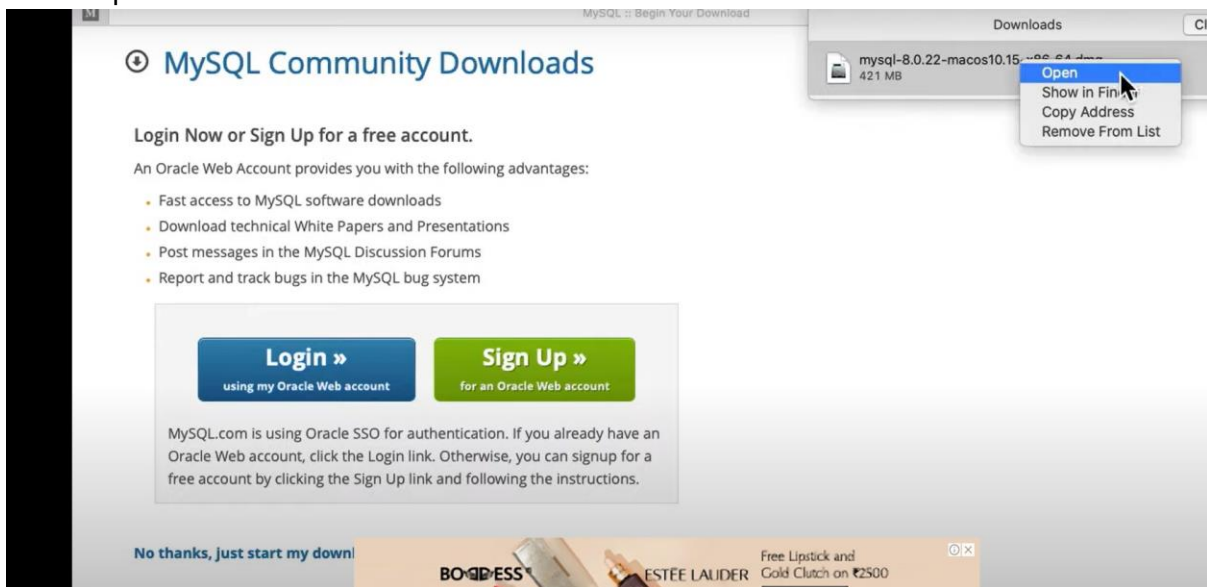

6. The given image below will open , click on –No, thanks , just start my download.

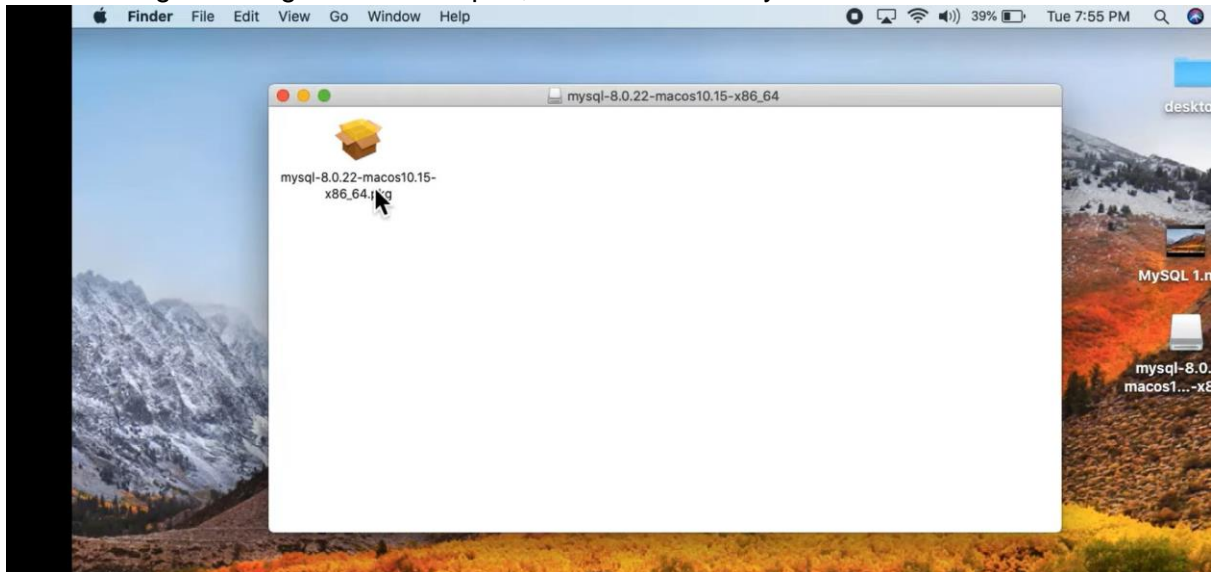

7. The given image below will open, file is downloading in the upper right corner.

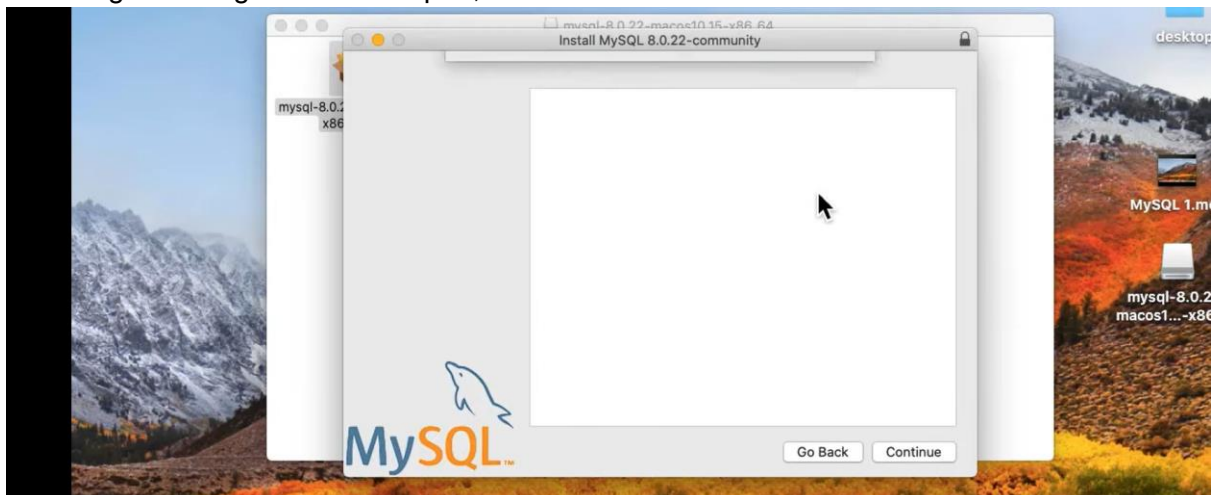

8. The given image below will open , right click on the downloaded file and click on open.

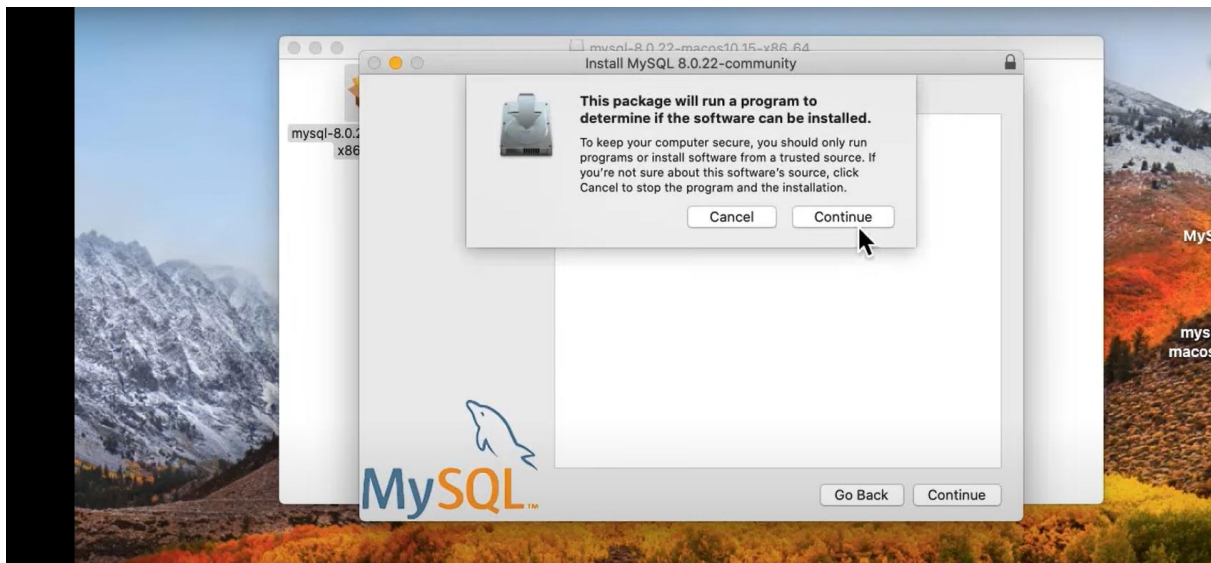

9. The given image below will open, double click on MySQL icon to install the file.

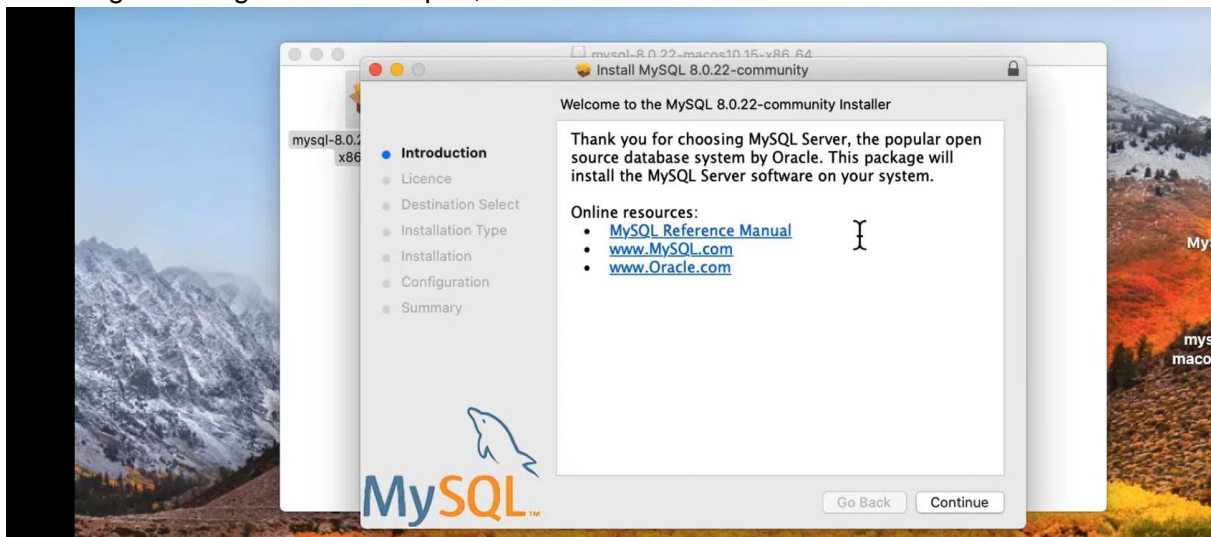

10. The given image below will open, click on continue.

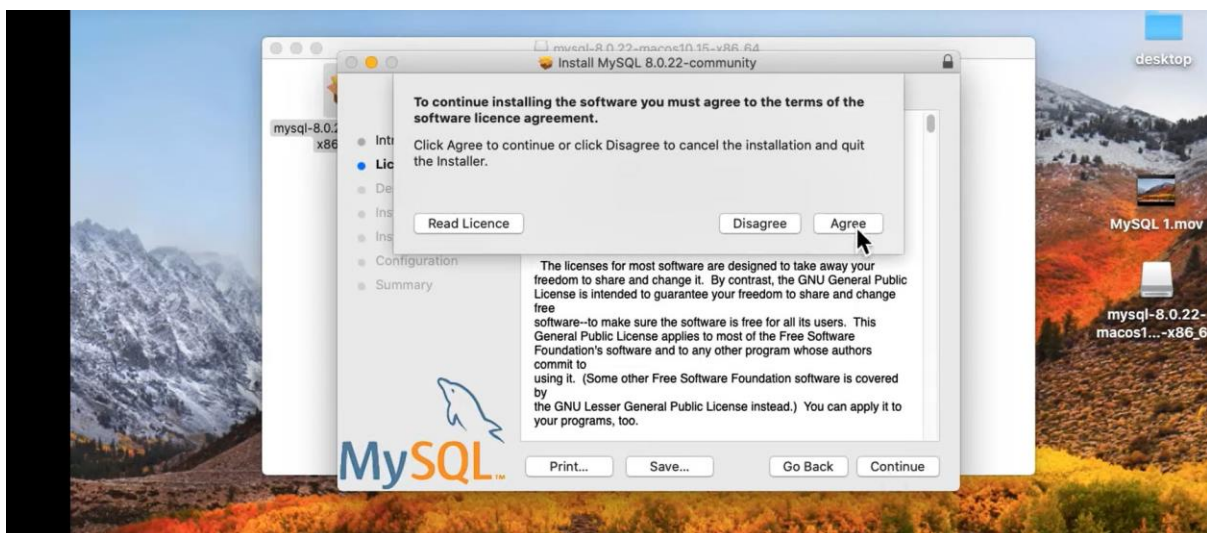

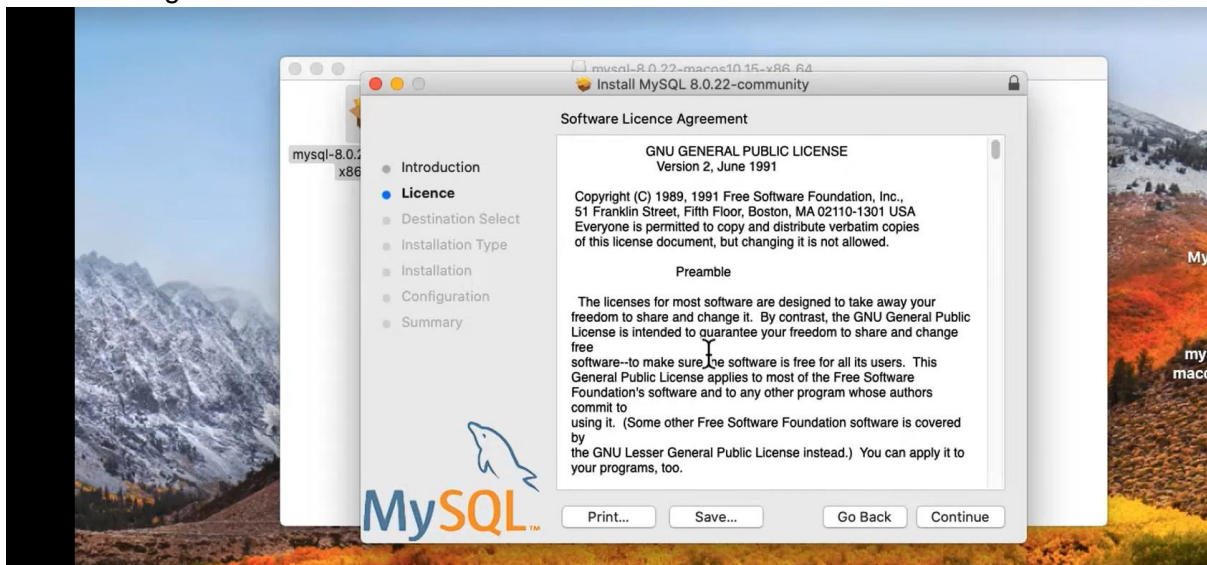

11. The given image below will open , click on continue.

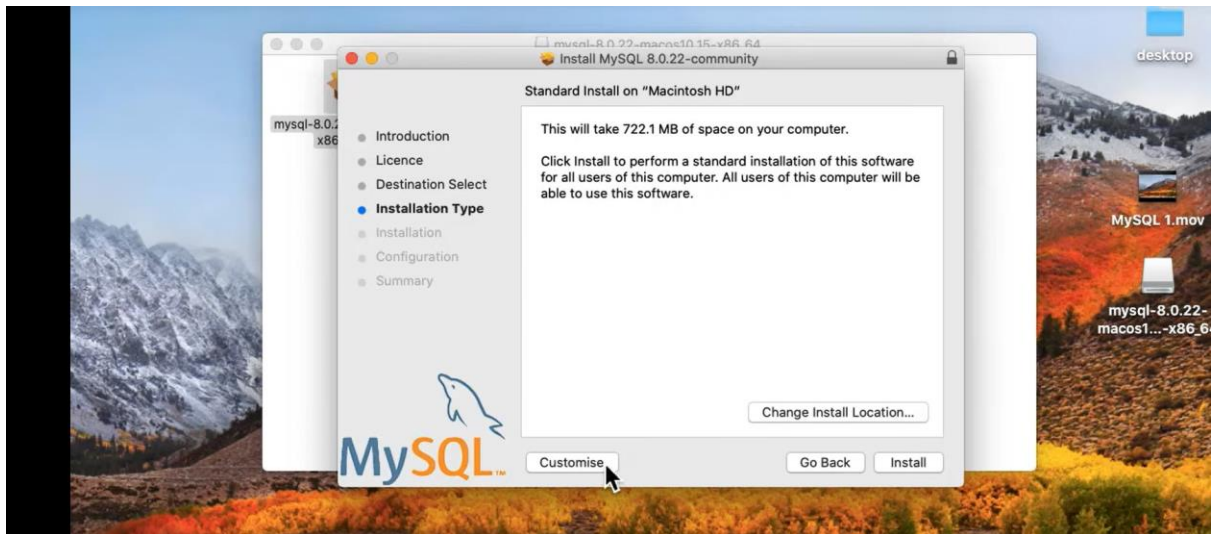

12. The given image below will open, click on continue.

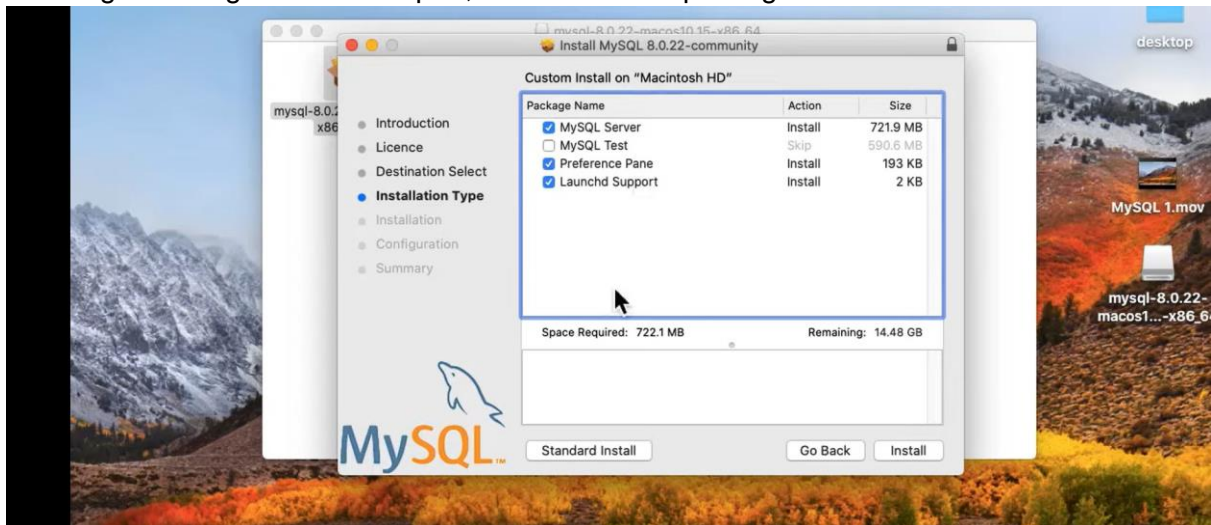

13. The given image below will open , click on continue and in next image click on Agree.

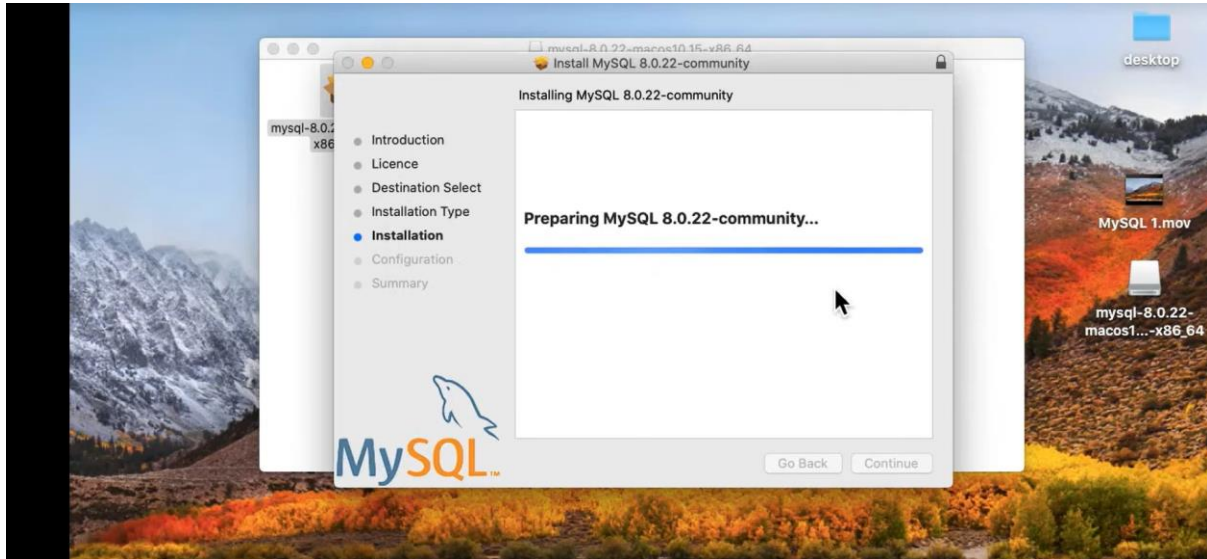

14. The given image below will open,click on Customise.

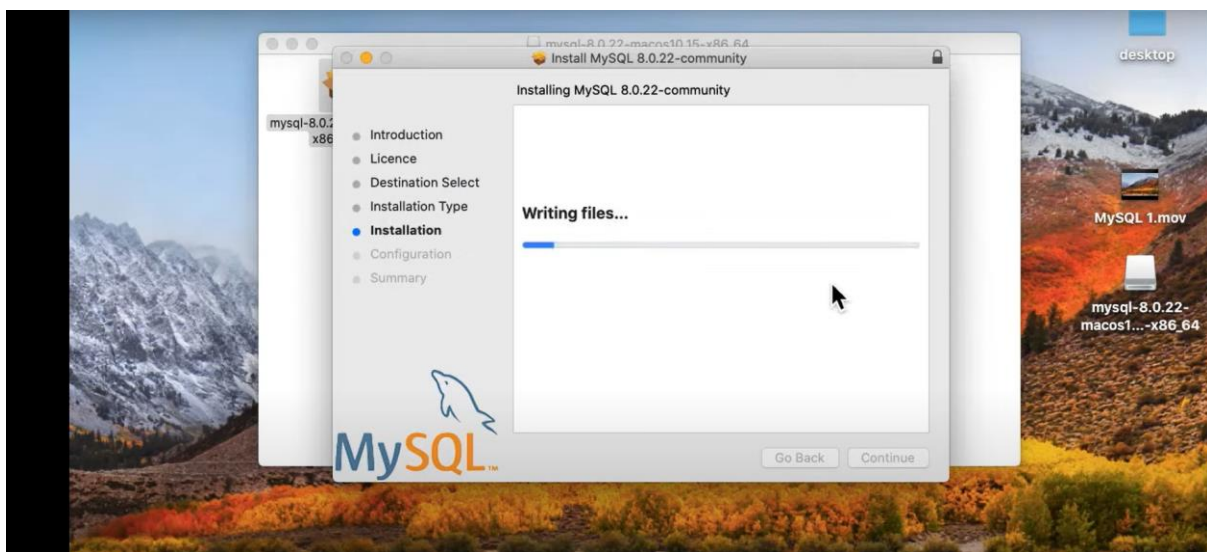

15. The given image below will open, we want all the packages— click on install.

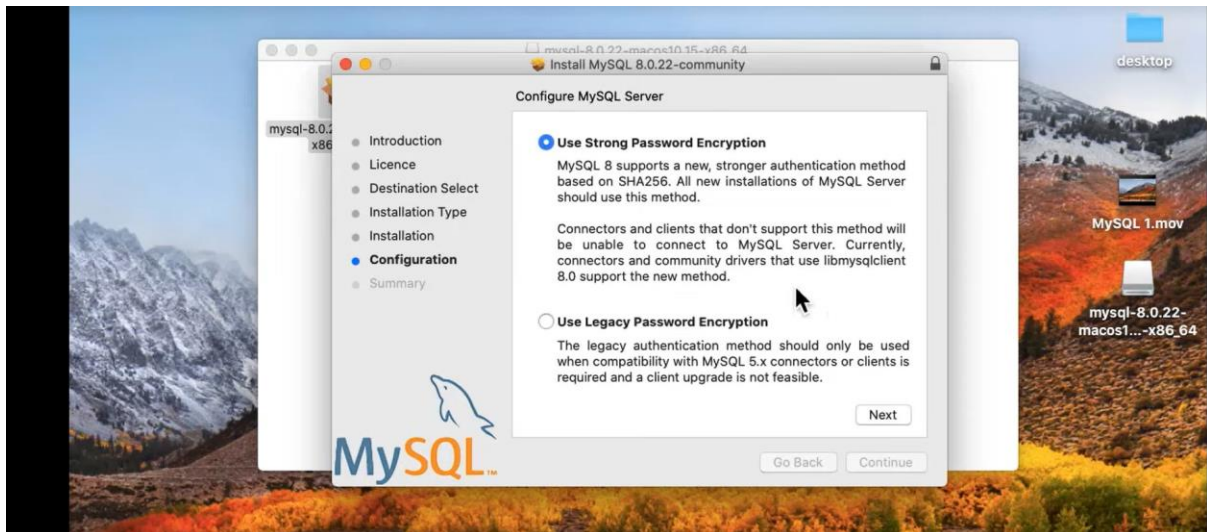

16.The given image below will open.

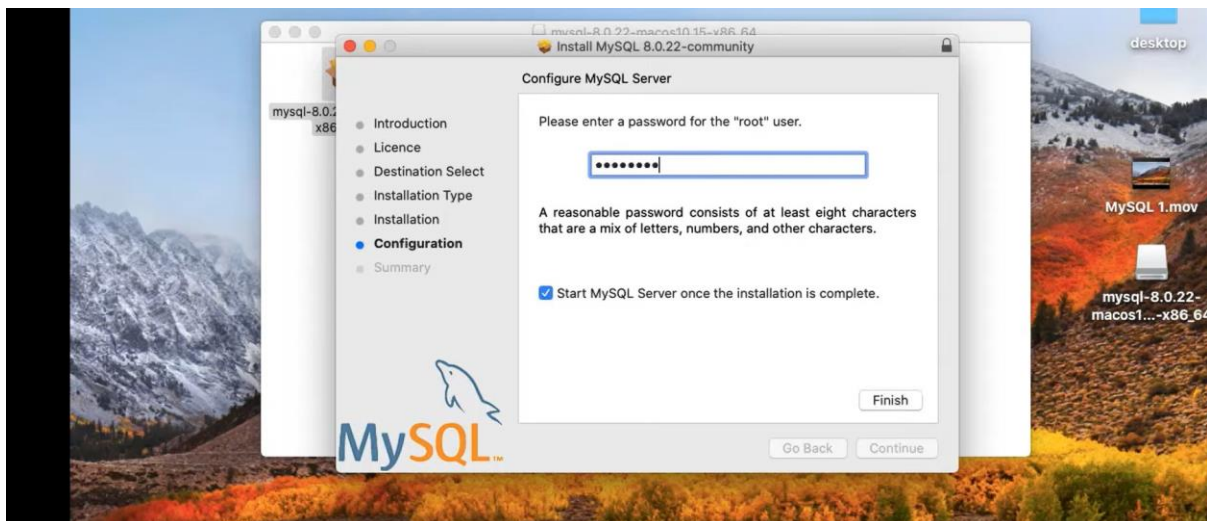

17.The given image below will open.

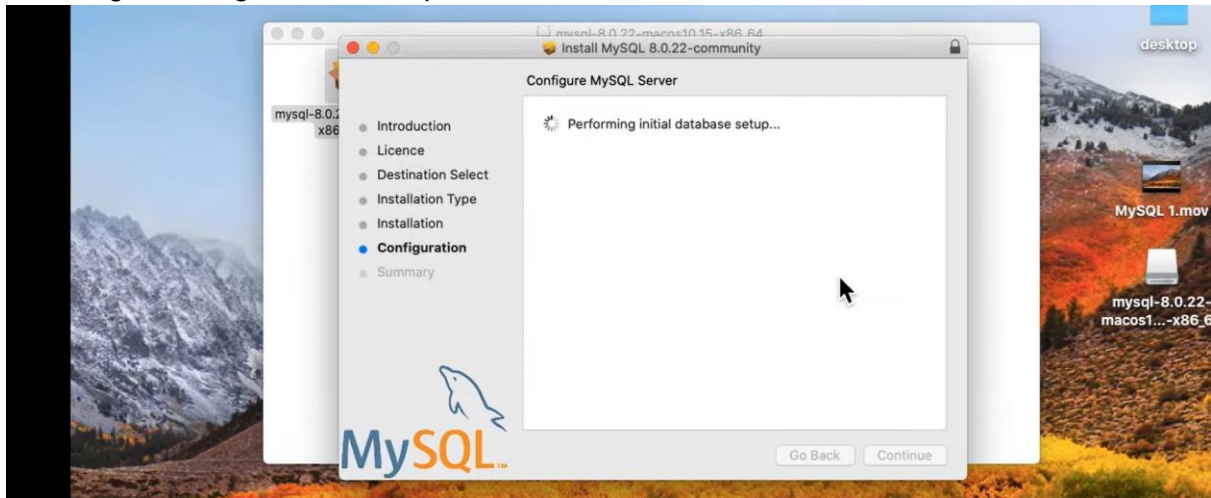

18. The given image below will open, choose the 1st option —use strong password Encryption Click on next.

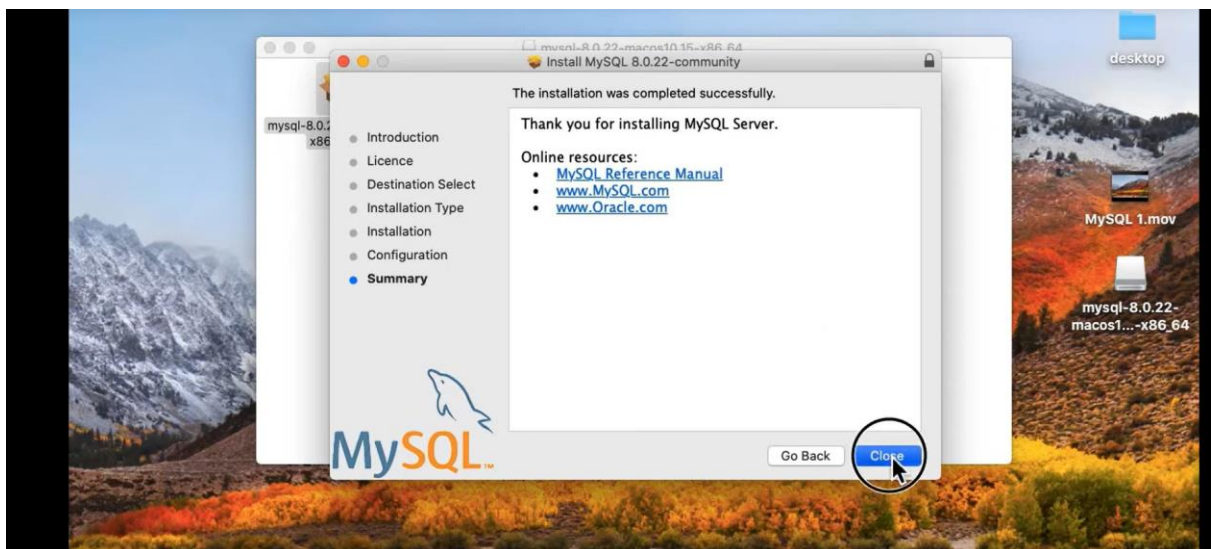

19. The given image below will open, enter password for root user. Click on finish button.

20. The given image below will open .

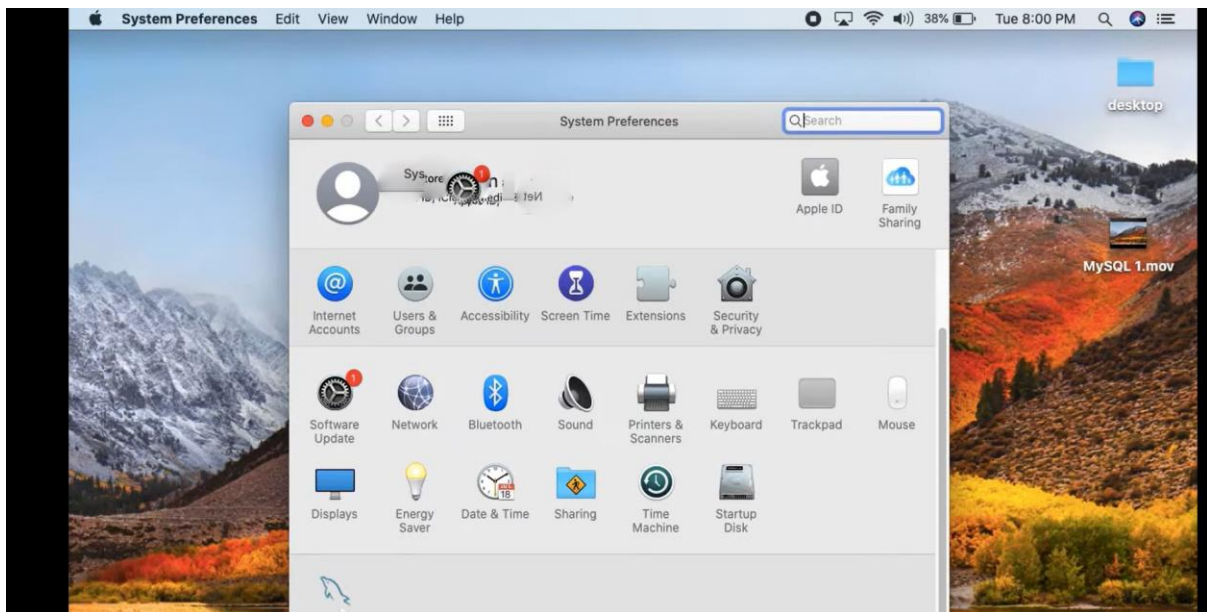

21. The given image below will open, click on the close button option.

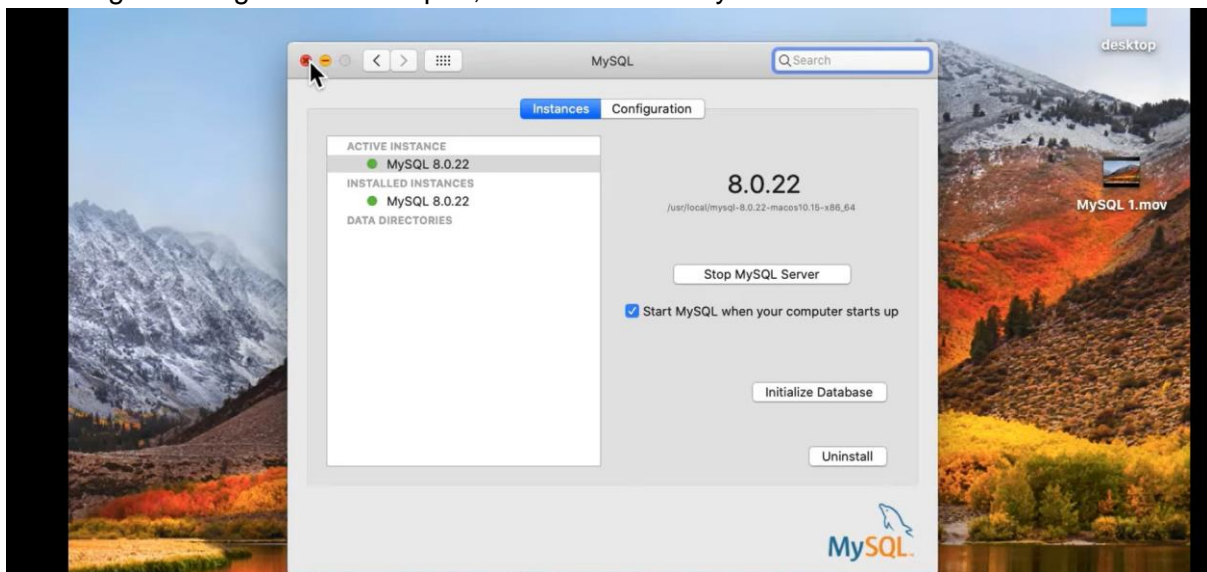

22. The given image below will open, click the apple sign near system preferences in the upper left corner.

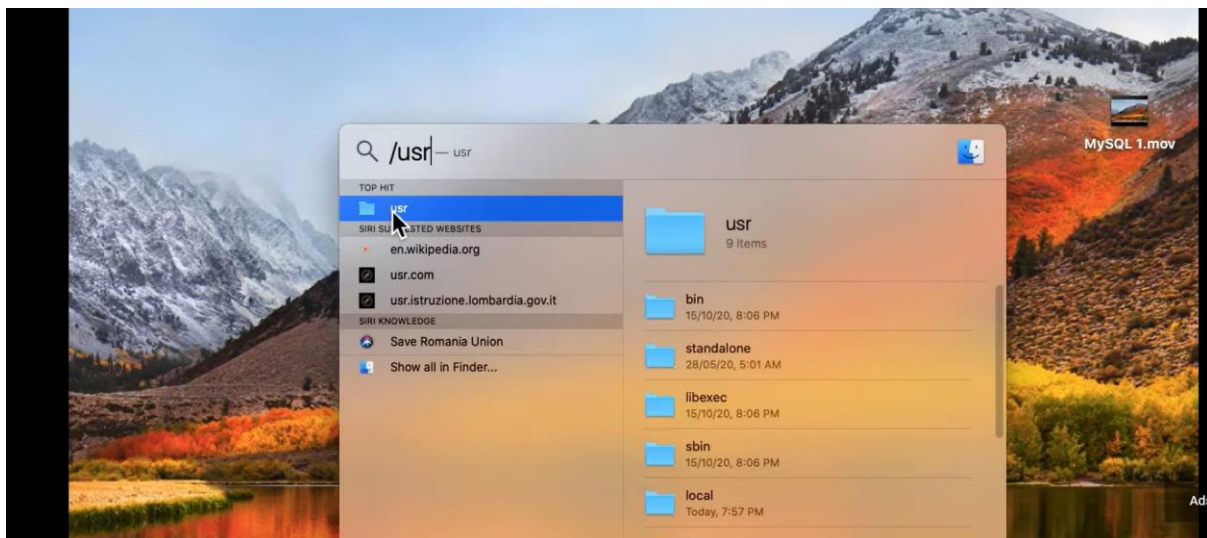

Click on system preferences.

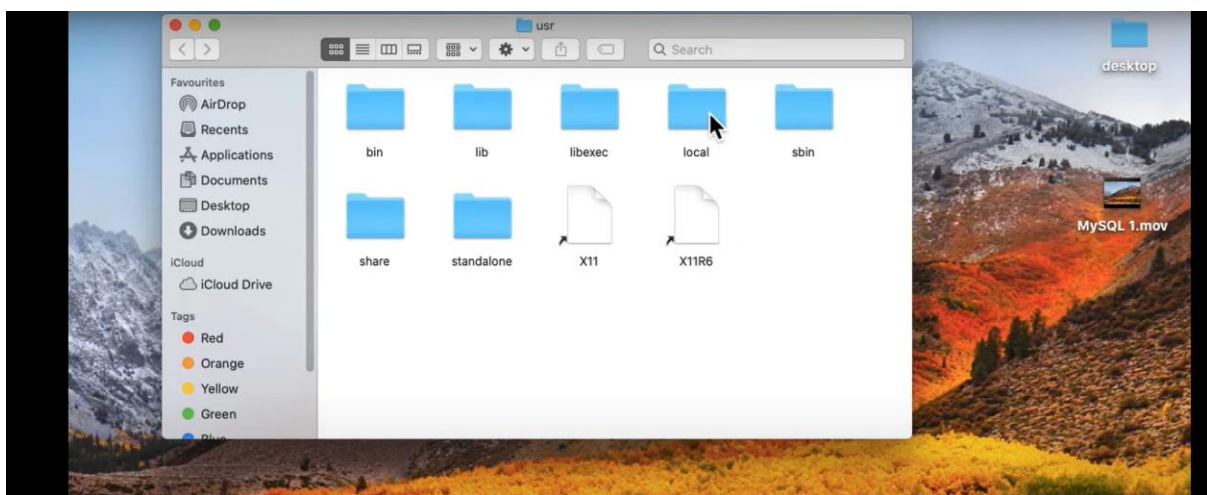

23. The given image below will open, double click on MySQL.

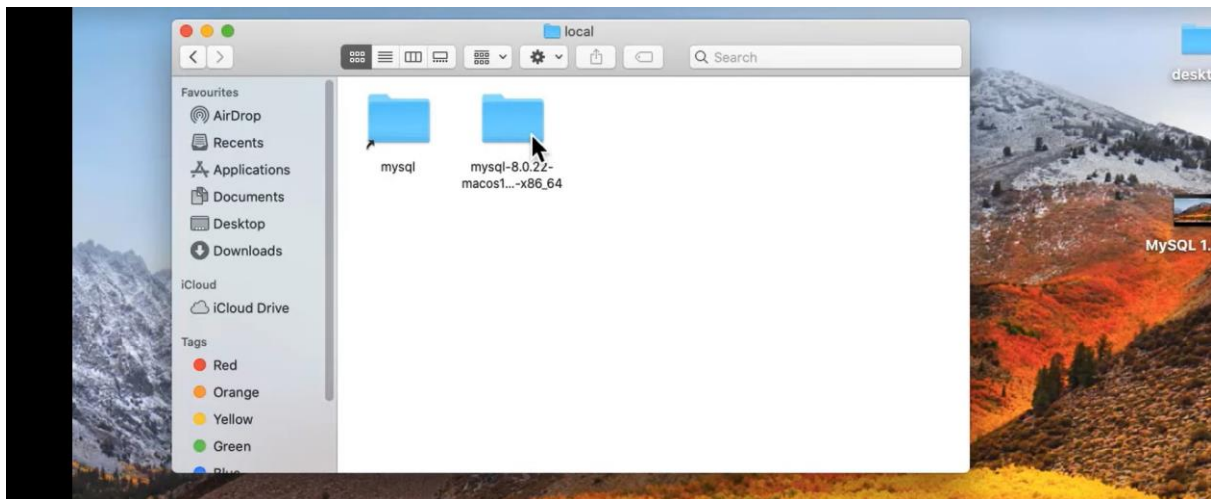

24. The given image below will open, type `usr` in search option. Click on `usr` folder.

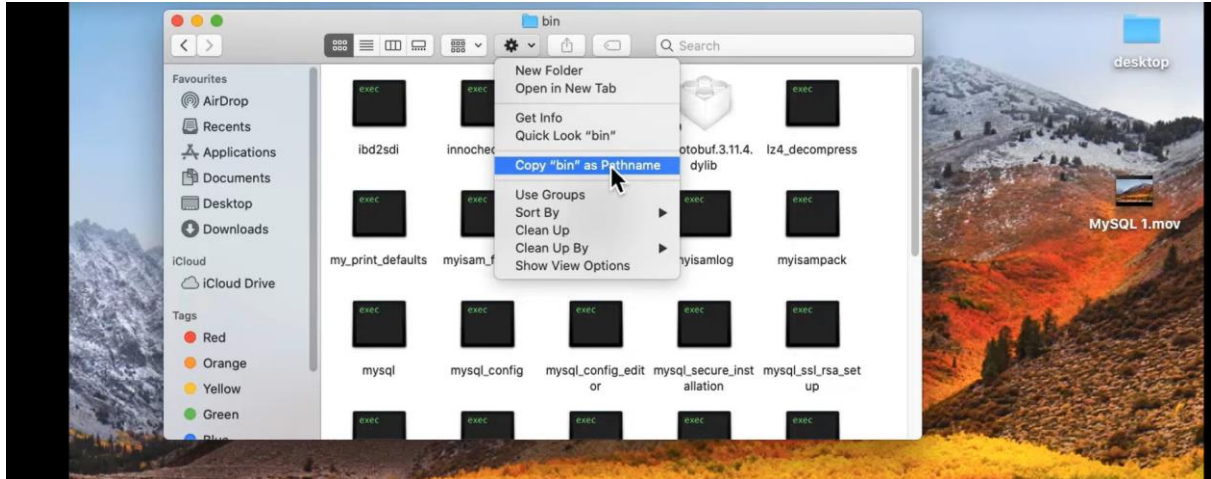

25. The given image below will open, click on the `local` folder.

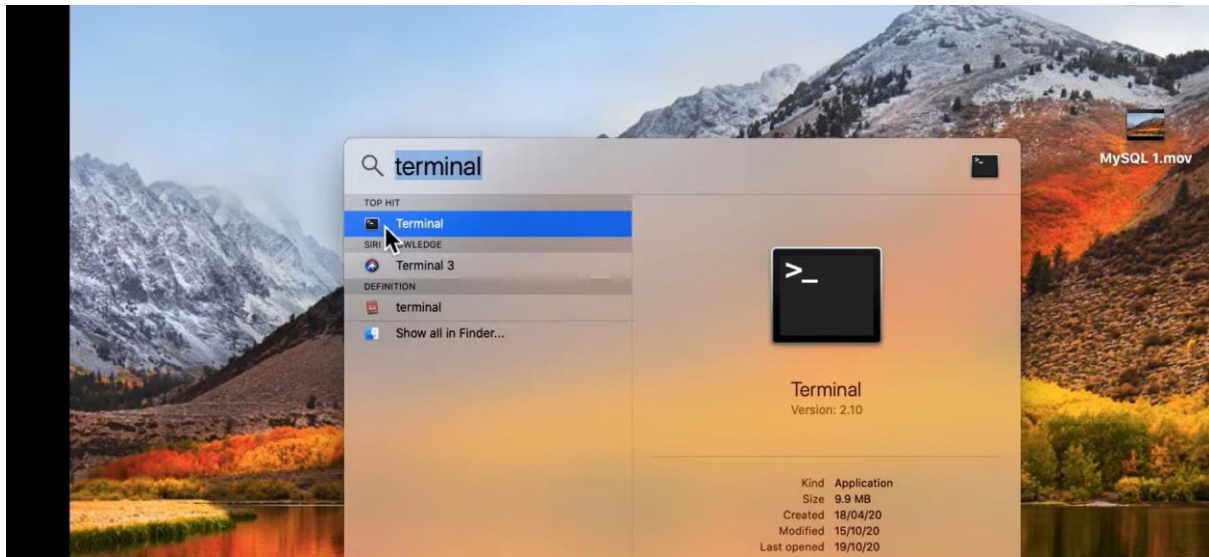

26. The given image below will open, click on the MySQL folder.

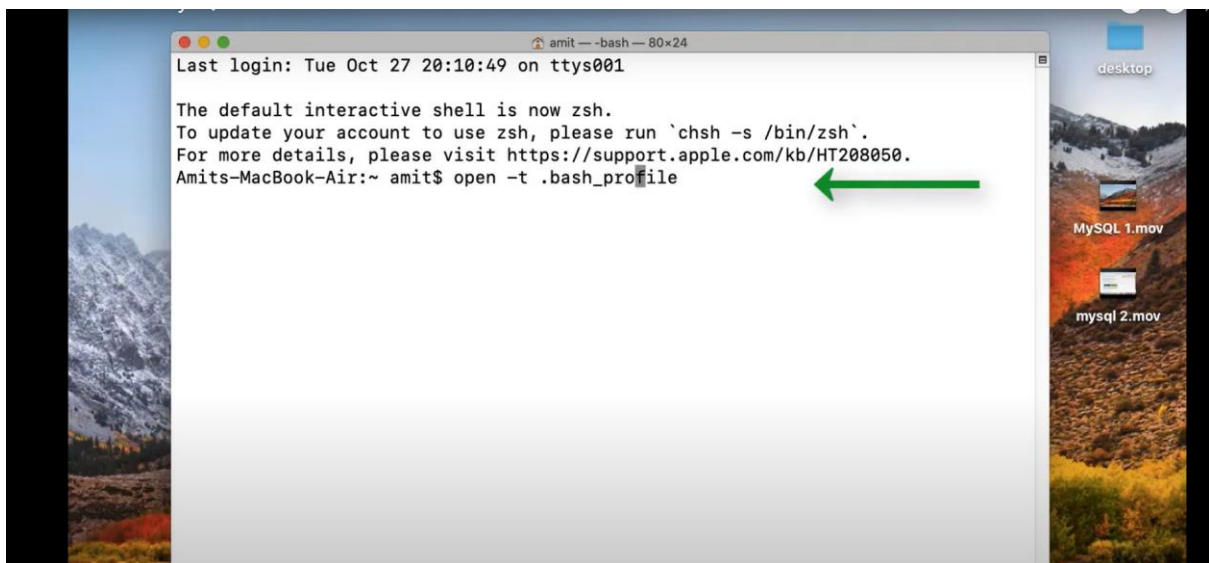

27. The given image below will open, click on bin folder —copy bin path name.

28.The given image below will open, search terminal in the mac search option.

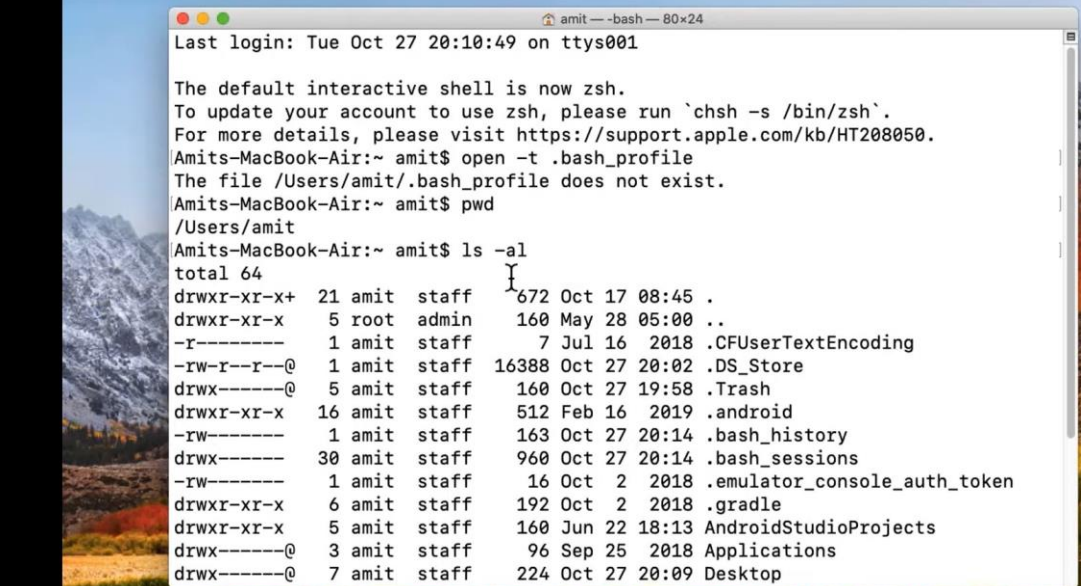

29.The given image below will open , type— open -t .bash_profile then press enter .

30. The given image below will open , click on continue.

Type pwd

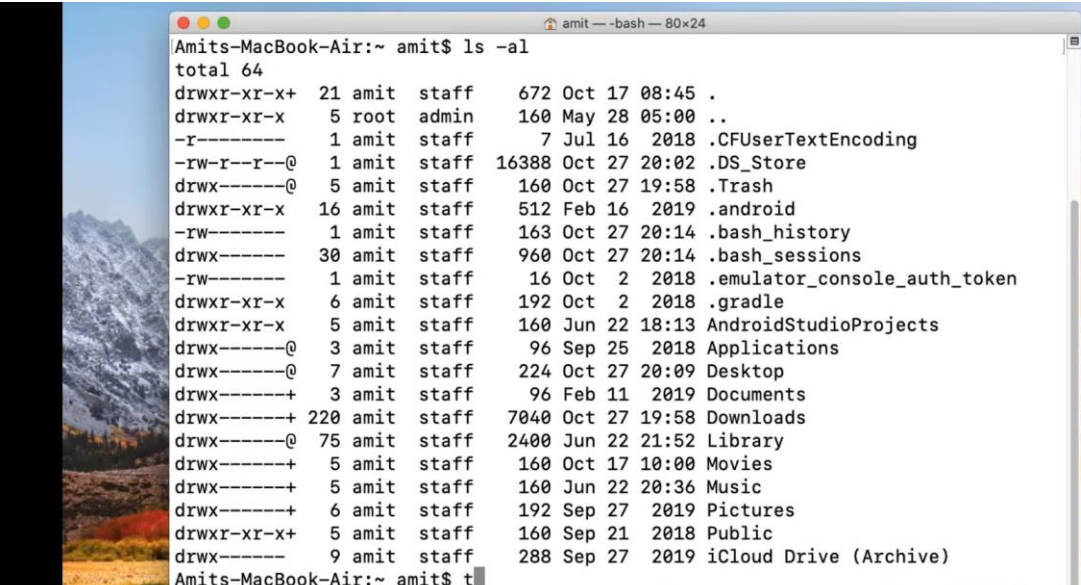

A screenshot of a macOS terminal window titled 'amit -- bash -- 80x24'. The window shows the following text:

```
Last login: Tue Oct 27 20:10:49 on ttys001

The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.
